Temporary Production Halt Due to Brisbane Flood Activity

RedFlow Limited (ASX: RFX) has today taken a decision to temporarily halt production at its 17 Mile Rocks, Brisbane, factory due to flood activity from the Brisbane River.

RedFlow staff are currently unable to access the factory due to closure of the adjacent street, and there is water entry into the RedFlow premises.

RedFlow management has taken steps to mitigate the effects and has a plan to restart production.

Phil Hutchings, CEO of RedFlow said: "At this time, the company does not anticipate this will lead to significant disruption of business, or impact to our current sales contracts other than some delays in deliveries and any costs associated in re-starting operations".

About RedFlow

Founded in 2005, RedFlow is now acknowledged as one of the world leaders in high performance zinc-bromine flow batteries (ZBM) for grid-connected electricity storage. RedFlow's utility-scale energy storage systems help reduce electricity distribution costs and allow clean solar generated electricity to be used at night.
